

STRUCTURE OF LEAKAGE PREVENTION PART OF DISCHARGE TUBE IN COMPRESSION TYPE LIQUID EXTRACTING LID**Publication number:** KR20010016054**Publication date:** 2001-03-05**Inventor:** LEE JEONG MIN (KR)**Applicant:** LEE JEONG MIN (KR)**Classification:****- international:** B65D47/06; B65D47/06; (IPC1-7): B65D47/06**- European:****Application number:** KR20000061425 20001015**Priority number(s):** KR20000061425 20001015[Report a data error here](#)**Abstract of KR20010016054**

PURPOSE: A leakage prevention part structure of a discharge tube in a compression type liquid extracting lid is provided to prevent liquid contents from falling down outside a container, thereby maintaining the container clean. **CONSTITUTION:** In a leakage prevention part structure of a discharge tube of a compression type liquid extracting lid, the discharge tube(7) having a discharging hole(8) is fixed or movably mounted at a predetermined inclination angle and sealed by a sealing part(11) of a lid(5) connected to the discharge tube, and a leakage prevention part(9) is formed on an upper part of the discharge tube with a predetermined curvature for preventing liquid contents from overflowing outside and adsorbed into a container due to the vacuum force generated when the container is restored after compressed.
